Sale Veterinarian

Oahe Vet Clinic
Mobridge, South Dakota ■ 605/845-3634

Inspection of Cattle

Sale cattle will be available for inspection at any time prior to the sale.

Lot Numbers

Ear tag numbers on the sale cattle will correspond to the sale catalog.

Delivery or \$\$\$ Off

Pick up your bulls on sale day or the following day and receive \$25 off each bull purchased. Or, Gill Red Angus will assist in making delivery arrangements of the sale animals to the new purchaser's destination at the least cost possible. All such deliveries are at the buyer's risk.

Sale Terms & Conditions

Any terms and conditions not covered by the catalog will refer to the Standard Terms & Conditions set forth by the Red Angus Association of America.

Gill Red Angus Guarantee

All bulls are guaranteed breeders. Any bull that settles one third or more of the healthy cows he services or passes a fertility test made by a competent veterinarian during the first six months after the sale date is considered a good breeder. All claims for adjustment or refund must be made within six months of sale date. All bulls returned must be in good and healthy condition. Any bull given a fertility test within the first six months after the sale date will be at the buyer's expense, unless the bull fails the test at which time the seller will pay for the fertility test. All bulls returned must be transported at buyer's expense.

"You buy our bulls, and we will bid on your calves."

The Gill Red Angus pledge to our commercial customers -

**"YOU BUY OUR BULLS.
WE WILL BID ON YOUR CALVES."**

We traveled the country this fall and bid on over 5,000 head of feeder calves from September to January. The quality of the Gill Red Angus-sired calves came shining through as they either topped the market or came in a close second.

Dear Friends:

We would like to welcome all of you to our annual production sale. A lot has changed at Gill Red Angus since our last sale. We have changed our calving date from March to May 15th. This will be our last spring sale. We have scheduled our next sale for Dec. 7, 2005, at which time we will be selling only 18-month-old bulls. These 18-month-old bulls will be wintered on a ration to gain two pounds per day until grass time. They will stay on grass until sale time this fall and will be cake broke. They should be in the right condition to be turned out and wintered with your older bulls.

Last spring we calved out about half of the registered cows and all of the commercial cows in May and June. This year all of our cows are due to start calving May 15th. We shortened our breeding season to only 45 days.

This fall and winter we traveled a lot of miles bidding on our customers' calves and yearlings. We bid on calves from Faith, S.D., to Motly, Minn., and points in between. The calves that we purchased were sent to the Samson Feedlot near Platte Center, Neb. At this time Scott Mueller, owner/manager of Samson is planning to be here sale day. This should give you a chance to visit with him about your feeder cattle. For those of you that aren't familiar with our program, it works like this. If you are a customer of ours, and you let us know when you will be selling your feeder cattle, we will be ringside to bid on them to make sure they bring what they are worth on that day. The price we can pay depends on the futures market.

The two-year-old bulls being offered were the youngest calves born in the spring of 2003. These bulls have not been offered for sale before. Last winter these bulls were fed to gain two pounds a day until May when they were turned out on grass. They were brought in October 6 and fed until sale time. These bulls are grown out well, but are not hog fat.

The yearling bulls have grown well this winter. We fed the same ration as last year, and the bulls are heavier, due to the fact that they weaned off heavier and a very mild winter.

If you have any questions or would like to come and look prior to the sale, give us a call. We love visitors.

The Gills

Several years ago we began looking for opportunities to achieve a competitive advantage in the beef industry. To gain that advantage we needed to be a part of a coordinated system that provides a consistent, low-cost, uniform product to the market place. This concept has evolved into working with Gill Red Angus, which produces genetics that provide high-growth bulls that meet premium carcass specifications. These characteristics allow us to pass on a higher value to producers while still reducing our costs of production.

Gill Red Angus has been a leader in working with us to identify producers who are buying these bulls. When the producer markets their calves, the Gills' have been representing us by bidding on the cattle that will fit our objectives. Once purchased or retained, we can turn our attention to developing the communication and information sharing programs that will reward us from conception to consumption. Developing these programs allows us to reduce costs of production throughout the chain and position us to add value to our end product. This value-added product may be as simple as a complete source-verification data base to attacking specific beef markets with a predictable product.

Even though the value-added market is the ultimate objective, reality says we have to be successful on the production side first. Calves gaining over 3.3 pounds per day, converting at 5.6 to 6.1 pounds of feed to pound of gain and reaching a 900-pound carcass weight is a power offense to the challenges that are faced in the beef industry. Many calves produced from Gill Red Angus genetics have been reaching these targets.

We are excited to be a part of this growing coordinated system. The results that we are seeing from working together give us confidence that we will all achieve our objectives.

Wow! Here is the thickest bull in the entire sale. This guy is very good, and he knows it. He is always strutting around like Mr. Important. He has always been one of those bulls that looks good. We have been watching him look good for just about two years now. His pedigree reads performance. Rattler bred to Reload, bred to Yogo. Well if you were wondering where all the muscle comes from, wonder no more. Those three will do it every time.

Another powerful Rattler son! I want every calf out of this bull. He is not only full of performance and muscle, but his carcass EPDs are off the chart with a positive .10 for marbling and a positive .21 for ribeye, while his backfat is a -.01. I know that we will see some high premiums on this guy's calves. To top it off, he has a 109 weaning weight ratio and a 110 yearling weight ratio.

Here is the flashiest bull in either pen. He looks great, and he knows he does. This guy is extremely smooth, very deep, and just all-around impressive to look at. The more I study this guy, the more I like him. His granddaddy was our high-selling bull a few years back going to Rock Creek in Montana and Double Diamond in North Dakota. They made the comment that he was the best-looking bull they had ever seen. His daddy was sold to Lloyd Red Angus in North Dakota and is now being used very hard up there and at our ranch on heifers. This boy is very athletic, and will cover a lot of cows for you. You won't be disappointed.

-3.8	17	36	24	33	8	65	678	1510		

Here is a true calving-ease bull with the numbers to prove it. But that isn't all he is, he came in at weaning time weighing 678 pounds with only a 65-pound birth weight. Then he kept growing and had a 101 yearling weight ratio. Not too often one comes out that small and keeps up, but he sure did it. He is out of a top Run Cloud cow. Run Cloud was used hard for several years on heifers here, and now his daughters are our best cows on the place. When you cross Run Cloud and Coppertop, you will get some of the best replacement females you have ever seen.

Because we are switching our calving season to May and June, we are able to offer these powerful older bulls that have never been offered in the Gill Red Angus Sale.

"You buy our bulls, and we will bid on your calves."

0.8	41	86	20	41	13	87	787	1520		

Okay boys, here is a STUD! He has absolutely everything needed to be a big-time bull in the breed. Anyone wanting anything at all needs to check him out. Let's start with his pedigree. He is a son of GMRA Wide Spread 972, the super bull in the Big Red Genetics lineup. That guy does a lot of things right. He has an awesome look with a lot of body, length, and a tremendous amount of growth. Widespread will give you all that, and then some. He has an all-star pedigree with Red Spread, King Rob, BJR Mattie, Excelator, Hobo 1961 and BJR Rambler 5162. Every one of them are known for their outstanding maternal traits. Now let's look at the bottom half of Big Spread's pedigree. There you will find Run Cloud, Presidio and the Roxie cow line. This is the same cow line that you will find on the next two lots. I just cannot say enough about the Run Cloud daughters. Over the past few years they have shined through to the top of our herd. They are outstanding cows with excellent udders, will give you a lot of performance, style and extra length, and will milk like crazy. His TM EPD went up by 10 this year and several last year. He's now sitting on a 46 TM. That is almost unheard of. He is one of the only proven bulls out there with that high of a TM. Our high-selling bull in 2003 was out of a Run Cloud daughter, last year's high-selling bull was out of a Run Cloud daughter, our high-selling bred heifer at the Santa Sale was out of a Run Cloud daughter, the overall high-selling heifer calf at the Santa Sale was out of a Run Cloud daughter. In 2002 we sold our top-selling bull calf ever to Select Sires, and he was out of a Run Cloud daughter. Do you see the pattern? Big Spread will be right up there on that list. Now to top it off his maternal great-grandam had the highest MPPA ever at Gill Red Angus when we sold her. His dam has an average

Lot 16

weaning weight ratio of 107 on five calves. This guy struts around knowing that he looks good. Now check out his individual EPDs and weights. His weaning weight is 787 lbs. to ratio 112. His yearling weight is 1520 lbs. to ratio 114 ratio. He gained 4.63 lbs. per day, and all of that with only an 87-pound birth weight! That is the highest yearling weight we have ever had. His EPDs are just as impressive, with an 0 to 86 spread from birth to yearling and a TM of 41. He is very long, and has a wide base to him, with a lot of muscle running down into his legs. He has plenty of middle and everything else is just about perfect. Big Spread needs to go to a good home to be a breed impacting sire.

Selling 100% possession and one-half semen interest. Gill Red Angus retains one-quarter semen interest, and the other one-quarter gets divided into 10 units at \$1,500 each. Each of the 10 units will consist of 50 straws of semen and part ownership in the bull so you will never have to purchase certificates. The new buyer will receive one-half of the syndicate money. (With this program, a \$7,500 bull potentially could be free to the new buyer.) No other semen will be released until 2007. Or the buyer can double the purchase price and own 100% of the bull.

"You buy our bulls, and we will bid on your calves."

Another set of super ET bulls out of our high-selling cow a few years back for \$7,000. She went to Cedar Top Ranch of Nebraska, and is now in their flush program. They sold 10 embryos to Bill Sexton of Minnesota. We sold a daughter to Forster Red Angus in North Dakota for \$5,000, and another daughter to Huffman Red Angus of North Carolina for \$3,500. One son sold to Leroy Dubray of South Dakota for \$5,000. These two guys fit right in the thick of things and will be on the top end of that list after the gavel hits. They are stylish, long and thick. The sire, LMG Gills Horizon 5379, was our high-selling bull in 2000 to Rock Creek Red Angus and Double Diamond for \$6,500. They made the comment that he was the best-looking Red Angus bull they had ever seen. Lots 17 and 18 are just like their daddy — long, thick and stylish. You cross these two top cattle lines, and you get a tremendous set of bulls like what we have here. Come and take them home. *Retaining one-third semen interest in both bulls.*

Here are two more ET bulls that are half brothers. The dam to both of them was a huge-bodied cow with a great udder. She sold to JD Red Angus in the Gills Girls II sale a few years back, along with some embryos, to Star G Ranch. This is the kind of cow that puts the power into the Red Angus breed. The sires of these two bulls are both well known in the breed. Mr. Beef is in the Genex lineup and was the National Champion. Since then his sons have topped sales all over the country. The other sire, Monu 4X, was used pretty hard here and had two bulls that topped our sales two different years. He adds a lot of length and muscle. Use these two with confidence.

"You buy our bulls, and we will bid on your calves."

She did it again. Every year this cow has a whale of a calf. She was flushed last summer and is now getting flushed again. We got 40 eggs, and then wondered, what are we going to do with all of these? So we put some in recips this summer and sold the remaining. We sold a high-selling son of hers a few years back, and have two daughters in the herd. And now this brute! He is one of the youngest in the sale, and he is as big as the rest. 4511 is long, smooth and thick. We sure like him, and I know you will too. *Retaining one-third semen interest.*

Another high-performing bull that goes back to Hammel Run Cloud 525. I can't say enough about how good his daughters are. Everyone is an excellent cow, and they have the top sons and daughters year after year. Check out his performance. He is over 1400 pounds at yearling. That looks like easy money to me. Pounds mean \$\$\$.

He also has a top pedigree going back to Reload, Topper, Run Cloud, Design, King Rob and Rebelas, one of the top carcass cows in the breed.

"Think ahead, breed 'em Red."

Okay, here is another stud. He has the look, muscle, length and depth that is needed, with an 80-pound birth weight and a 1470-pound yearling weight. If that doesn't work, I guess I don't really know what does. Now check out who his dam is out of. Yup, Run Cloud 525. Time after time he does it. She has a great udder and a great look. Run Cloud not only make calf raisers, but he does it right in the udder factory too. They are level with the perfect size teats. Okay, this guy is out of our high-selling bull in 2002. He goes back to Sams Prospector, Monu 4X and Rambo. The paternal grandam, LMG Poteet 419, was used as a donor cow here before we had to put her down. On the bottom side of the pedigree, you will find Run Cloud, Canyon and the great Sara line. That line has been at the way front of the pack for years here. The dam, grandam, great-grandam, and great-great-grandam are all at or over 102 for their MPPAs. Put that next to all the great maternal bulls in this pedigree, and you have a great bull. The Monument sons are the longest bulls in the sale, and this guy is no exception. He also is one of the thickest, if not the thickest bull, in the sale. Come get this high-performing, strong maternal, low birth weight bull, and improve your herd. Oh ya, I almost forgot, he has the highest average daily gain at 4.98 pounds while feeding for a three-pound gain. *Retaining one-third semen interest.*

Here we go again — another Sbull out of a Run Cloud 525 daughter. They just keep coming and coming and coming. About like the Energizer bunny.

Another huge yearling weight bull. This guy's dam is a donor cow prospect. She has a 110 weaning weight ratio on four calves. Make sure you keep the daughters out of this guy. Everything came together this year with this set of bulls. Our performance is higher than ever before, and our quality of the overall pen of bulls is the best yet. Feel confident when buying into the Gill Red Angus program. We will be there for you all year, especially when it is selling time.

Another very powerful Heavens Door son that is out of a great cow. Every year she brings in one of the best. This year is no different. He is long and thick. He is the type of bull that will add a lot of muscle to your next calf crop. To top it off, his dam has an average weaning weight ratio of 110 and an average yearling weight ratio of 108. So keep every daughter you can out of him, and your cows will go to the next level.

GILL RED ANGUS

**Sandy Willow Red Angus
Glenn Gaikowski

Dear Cattlemen:

Welcome to the annual Gill Red Angus Production Sale. I hope everyone took advantage of the strong cattle market this past season and look forward to many more to come.

Sandy Willow Red Angus is operated by myself and my soon-to-be wife, Misty Ehlke. My parents, Dean and Deb; two brothers, Justin and Paul; and I help run the family farm located in northeast South Dakota near Waubay where we run commercial Red Angus cows. I have been producing registered Red Angus cattle since 1996 and have used predominately Gill Red Angus genetics. My main focus is to produce a bull that is efficient, good tempered, maternal, easy to look at, and most of all, a bull that will add pounds.

We hope that your bull needs are met, and if we can help you in any way possible, let us know. You are sure welcome to stop by and visit anytime or give us a call.

Sincerely,
Glenn Gaikowski

A top Glacier Chateau son that deserves some recognition. He is big and stout with a lot going for him. He has plenty of length with a big butt. He gets that from his dam who is a Barney daughter. This female line is known for its stayability; he has a 13. The Chateau cattle have been used very hard throughout the country the past few years. He is known for great daughters, lots of length and a super carcass. This guy will do you a lot of good.

"You buy our bulls, and we will bid on your calves."

A top Monu 4X son. We have been selling these guys now for several years, and every year they are at the top of the pack. But with this guy you are getting to tap into the great Sara line that I always brag about. This guy has the extra length that puts that extra weight on your calf crop when you take them to town.
