This guy was destined to be a high selling yearling last year until he injured a leg and he had to be separated for a couple weeks until he healed up. So we put him in with this group of bulls. There is no sign of the injury, and hasn't been one all year. He is a real good bull with a unique pedigree. He goes back to the SAV Traveler 004 from Schaff Angus Valley in ND. Come get him.

OK, here is an exciting bull. He may not be the heaviest bull in the pen, but the genetics in him are as good as it gets. His dam is the dam to Roxie 1080 and grand dam of Roxie 4110, both donor cows here. She is also the maternal grand dam of Vin Diesel, and she was a donor cow herself. She knocked a hip down at the age of 13 and she raised this guy that summer. So with having a bad hip and being 13 years old, she still raised a bull calf who weaned over 600 lbs. I'd say that is pretty darn good. The sire is the good No Doubt bull who is out of the great Dynette 3041 cow. With the combination of Indeed, Dynette, and Roxie, exciting things will happen with this guy's calves!

This good embryo son is a top Data son who is out of the dam of the great VonForell Super Vision bull that Genex carries. Several times I've tried to take a photo of the good R709 cow for the late Marry VonForell, but I never could get a good one. She was the backbone of her program, but just wasn't photogenic. She was a real moderate framed cow who had all kinds of body, a good udder, and real sound made. Just the kind of cow that keeps the breed moving forward.

Pen: 103

Lot 72

CHANGES TO THE EPDS

Starting with the Fall 2012 EPD run, both Simmental and Red Angus EPDs are run as one – their EPDs are published on the same multi-breed base and scale for growth and carcass EPDs. For the commercial cattleman, this will greatly simplify their selection process as they will be able to directly compare growth EPDs (BW, WW, YW, Milk) and Carcass EPDs (Marb, YG, CW, REA, Fat) across the two breeds, as well as compare EPDs of registered hybrids and composite seedstock.

Yes, Red Angus EPDs will look different

Producers will notice some changes to how Red Angus EPDs will look. But, most importantly, the rank between animals will not change. A power bull based on last spring's EPD run will be a power bull on the new multi-breed base. Likewise, a carcass bull will still be a carcass bull, and a low birth weight bull will still be a low birth weight bull relative to the rest of the Red Angus breed.

Today's Average EPD's are as follows:

BW: -1.2 **WW:** 55 **YW:** 83 **Milk:** 19 **Marbling:** .39 **REA:** .13

Since average has changed, just because it is a BW of a -1, that does not make him a calving ease bull. Please use the percentile listed below each EPD number. The lower the percent on each category, the higher it ranks. For example, a bull that is listed 10% for birth weight, is actually in the top 10% of the breed. While a bull that is listed as 90% for birth weight is in the bottom 10% for the breed. So the second bulls calves will most likely be a bit larger at birth than the first bull. This works the same on all the EPD categories.

If you have any questions, PLEASE ask us, we don't want you buying a heifer bull that is really a cow bull and vice versa. It can be confusing.

Here is one of those guys that if he would be a March calf we would have held him over and made a 2 year out of, but since he is a May calf, that was our plan already. He had a touch of foot rot in August and he lost quite a bit of weight. By the time we weaned him, he was over it, but it did affect his weaning weight quite a bit. I would be willing to bet that if he didn't have foot rot in the August heat, he would have a weaning weight pushing 700 lbs instead of 600 lbs. Here is a sleeper, come get him. **Pen: 202**

OK, here is a bull who has to sell as a commercial non papered bull. This guy was purchased as embryos, they were put in, calved out, and then the dam was blood tested and the seller of the embryos can't come up with a true pedigree. The pedigree listed is who it is suppose to be and is believed to be who it is, but it can't be proven so that is why it sells as a non papered bull. It surely doesn't hurt the bull, but it is what it is. The EPDs are parental average, but not made by the association. Anyway, this guy is moderate in frame, real deep chested, and has that easy keeping look to him. He will breed a lot of cows and do a great job on his calves. **Pen: 203**

This good fall born embryo bull is exciting by both pedigree and phenotype. His dam is the super SRN Tidy Bee 2066 cow and he is sired by the popular Cowboy Cut bull out of Canada. He does a lot of things right and will catch your eye sale day. The Tidy Bee cow has a 106 MPPA and has proven herself over and over again in several different herds across the country.
